

9410: Custom Digital Sound Systems and Recording Studio

Custom Electronics have applied their vast experience in digital electronics and broadcast applications to provide the latest in computerised sound systems together with a Recording Studio and Rehearsal centre at Biggleswade. The facilities are general purpose, for all types of sound projects ranging from music production, through corporate, to broadcast.

Recording Studio and Media Production:

The Custom recording studio is self-contained with performance studio and separate computerised engineering control room. The latest digital technology is available to ensure the highest standard of sound recording, storage, mixing and production for all types of project.

Designed principally with live musicians in mind, the facilities are highly performance friendly, allowing the artists to easily move from rehearsal to recording stages without losing creativity.

The recording atmosphere is close and not disturbed by the engineering technology of the separate control room. An extensive

artists monitoring system means that even full bands can be recorded "live" if desired, using an independent monitoring mix.

The studio also has an Overview PylonCam installed, which can be controlled by a local operator to record session video clips. This can also be interrogated from the Internet site, and even controlled remotely by email.

Features: -

- /// Large studio area
- /// Performance isolation from engineering
- /// Full live-band capabilities
- /// Independent artists monitoring mix
- /// Latest computerised recording
- /// Multi-channel concurrent recording
- /// Digital effects processing
- /// Computerised mix-down automation
- /// High quality monitoring
- /// Automated live video recording
- /// Live Internet website publishing
